# INTUG contents

IIR Number portability 22 ix 2004  
[www.INTUG.net](http://www.INTUG.net)

- about INTUG
- a prerequisite to competition
- successes and failures
- migration
- new services
- convergence
- conclusions

# INTUG what is INTUG?

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- members:
  - national associations
  - corporations
  - individuals
- activities:
  - ITU and WTO
  - OECD
  - APEC TEL, CITELE and the European Union

# INTUG our aims

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- real and effective competition
- genuine choice for users
- lower prices
- higher quality
- more innovative services
- constructive co-operation with
  - international bodies
  - governments
  - regulators

# INTUG priorities

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

1. open access to global mobile networks
2. regulatory best practice
3. liberalization
4. universal access
5. broadband
6. leased lines
7. IP telephony
8. numbering

# INTUG numbering priorities

- non-discriminatory provision and use
  - ensuring appropriate availability of numbers to all operators and users
  - assignment of numbers for new services and applications
- **portability**
  - **ensuring portability for fixed (geographic and non-geographic) and for mobile numbers**
  - **minimising obstacles, delays and charges for portability**
- transparency
  - advocating clarity in the links between tariffs and numbers
  - ensuring mechanisms to allow users to find the costs associated with numbers
  - ensuring call barring is available for expensive number ranges
- availability of multi-country and global numbers
  - advocating the availability of supra-national numbering ranges at cost-effective prices
  - advocating the reform of the existing "universal" numbering ranges

# INTUG uncompetitive mobile markets

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- extremely complex tariff schemes
- very high termination rates
- outrageous roaming charges
- blocking of alternate technologies
- 3D on number portability:
  - deny
  - delay
  - degrade

# INTUG 3G

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- Games, Gambling, Girls
  - Badlands
    - “First and foremost, you're going to die”
  - Ladbrokes Balls
  - Playboy on 3 (Australia and UK)
- the only successful 3G markets are Japan and South Korea:
  - millions of customers
  - significant additional revenues
- was supposed to be one extra operator
  - but frequently unchanged

# INTUG ecosystem

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- range of networks:
  - GSM, CDMA, UMTS
  - WLL (CDMA and PAS), Wi-Fi, Wi-MAX
  - DAB, DVB, DMB
  - fixed broadband (with Wi-Fi)
- range of services:
  - messaging, voice, videotelephony
  - streamed content
  - location based services (?)
- range of devices:
  - PC, PDA
  - games console
  - set-top box

# INTUG range of identities

- telephone number(s)
  - real
  - temporary (e.g., local SIM card)
  - virtual
- handset and SIM card (IMEI, IMSI, etc)
- IP addresses (real or mapped)
- personal:
  - social security, passport, identity cards
  - credit cards
  - frequent flyer

Some are needed to block or open access to adult content

# INTUG payments

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- tied to numbers
- inaccuracy of bills
- premium rate “scams”
- third party billing
- mobile phone is also a banking instrument
- purchases:
  - added to monthly bill
  - deducted from stored value
- e-Money directive

# INTUG ubiquitousness

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- Japanese and Korean vision
- services and commerce
  - but multiple networks
- identity is **not** tied to the network
- many operators are looking for vertical integration
- many service providers want to use multiple networks
- what are the business models?

any time, any place, any service, any network  
European Commission

# INTUG legal position

- EU binding obligation has required portability since 25 July 2003
- fixed and mobile:
  - DK and CH have provisions for fixed to/from mobile
- technology neutrality, so xG
- no obligations on user IDs, IP addresses or the like

# INTUG churn is good

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- ability to switch supplier is a sign of a properly functioning market
- operators trying to lock customers in:
  - handset subsidies
  - network specific handset designs
  - tariff schemes
  - walled gardens
- but:
  - unattractive to customers
  - invites responses from NRAs and NCAs
- competition law is very clear on
  - walled gardens
  - rigged menu systems (EPGs and CRSs)

# INTUG users need

IIR Number portability 22 ix 2004

[www.INTUG.net](http://www.INTUG.net)

- trans-national services
  - without roaming charges
- fixed mobile convergence
  - without excessive termination rates
- control of our identities:
  - we have created their value
  - we make calls
  - we disseminate the numbers and so generate inbound traffic

# INTUG conclusions

- competition is more talked about than experienced:
  - much is lost in the bundling of services
- transition to 3G must not see a reduction in competition
- operators need to ease and to accelerate transfer to 3G
- so far few have moved
- serious threats to 3GSM from alternative technologies

# INTUG looking ahead

- VoIP is an increasing issue:
  - very low prices and costs
  - virtual telephone numbers
- ever wider range of Services over Internet Protocol
- importance of national numbers disappears into the IP cloud
- dialling of numbers is declining in importance

# INTUG thank you
